

PATIENT MEDICAL CHART

CONFIDENTIAL - FICTIONAL RECORD FOR AUTHORIZED SOFTWARE TESTING

1. PATIENT DEMOGRAPHICS

Field	Value
Patient Name	Alicia Marie Foster
DOB / Age	July 20, 1971 / 54
MRN	ENT-290431
Sex	Female
Address	118 Palm Ridge Way, Jacksonville, FL 32207
PCP	Dr. Owen Harris, MD

2. INSURANCE & COVERAGE

Field	Value
Payer	Anthem Blue Cross commercial PPO
Member ID	ANT-44190821
Group	PPO-7716
Prior authorization	Required - sleep surgery
Requested service	Uvulopalatopharyngoplasty as sole procedure

3. ACTIVE PROBLEM LIST

ICD-10	Diagnosis	Status
G47.33	Obstructive sleep apnea	Active
I10	Hypertension	Active
J34.2	Deviated nasal septum	Active

4. MEDICATIONS

Medication	Dose	Frequency	Indication
Amlodipine	5 mg	Daily	Hypertension
Fluticasone nasal spray	2 sprays	Daily	Nasal congestion

5. ALLERGIES

Allergen	Reaction	Severity
Codeine	Nausea and vomiting	Moderate

6. SLEEP MEDICINE CONSULT - JANUARY 8, 2026

- Reports loud snoring, witnessed apneas, morning headaches, and daytime sleepiness.
- Epworth Sleepiness Scale 13/24. Hypertension is treated but remains intermittently elevated.
- Home sleep test ordered.

7. HOME SLEEP APNEA TEST - JANUARY 20, 2026

Measure	Result
Recording time	6 hours 42 minutes
AHI	12.8 events/hour
Oxygen nadir	84%
Supine AHI	18.2 events/hour
Impression	Mild obstructive sleep apnea

8. PAP THERAPY HISTORY

- Auto-CPAP 5-15 cm H2O initiated February 1, 2026.
- Download covering February 1 through March 14 shows use on 33 of 42 nights; usage greater than 4 hours on 76% of nights used.
- Residual AHI while PAP was used: 3.2 events/hour.
- Patient reports mask leak, dry mouth, and claustrophobia. Chart documents one mask refit at week 2 and humidifier adjustment at week 3.
- The record does not clearly state that inability to tolerate CPAP persisted despite adjustments over at least one full month; one note says patient stopped using PAP after March 14, while another says intermittent use continued.

9. ENT CONSULT - APRIL 3, 2026

- Patient requests surgery because PAP is uncomfortable.
- Oral examination: elongated soft palate, Friedman tongue position III, tonsils 1+.
- No fiberoptic nasopharyngoscopy report is included in the chart. The note states: "Endoscopic airway localization to be completed before final surgical planning."
- UPPP proposed as the sole procedure, CPT 42145.

10. FOLLOW-UP - APRIL 24, 2026

- AHI 12.8 plus hypertension and Epworth score 13 are documented.
- The clinician states CPAP intolerance but does not reconcile adherence data showing effective residual AHI or document a complete one-month adjustment trial.
- No fiberoptic endoscopy result is present. It is unknown whether retropalatal narrowing is the primary source of obstruction.
- Patient is 54 years old.

11. PLANNED PROCEDURE

Field	Value
Procedure	Uvulopalatopharyngoplasty as sole procedure
CPT	42145
Diagnosis	G47.33
Requested date	June 10, 2026
PA status	Pending
Surgeon	Dr. Helen Brooks, MD

Clinical indication summary

- AHI is 12.8 events/hour.
- Hypertension and excessive daytime sleepiness are documented.
- Age criterion is satisfied.
- CPAP intolerance pathway is incompletely documented and internally inconsistent.
- Required fiberoptic endoscopic localization is absent.

12. DOCUMENTS NOT PRESENT

- Fiberoptic endoscopy report identifying retropalatal narrowing as the primary obstruction for UPPP alone.
- Clear longitudinal statement demonstrating inability to tolerate CPAP despite adjustments over at least one month.
